

iTutor

Product Owner: Tharita Tipdecho 59090035

System Analysis: Napat Traikityanukul 59090011

Problems Description

Today, we have lots of tutors both online and offline. The problem is you do not know whether the tutor is good or bad, overrated or underrated, overpriced or underpriced. You need to get the information about the tutor by word of mouth or from chat groups or pages in the social network, just to have the best tutor for you, or for your child. Sometimes, unfortunately, you might not have any connections to know the information about the best tutor, or you don't have enough time researching on that.

Therefore, we develop this application to be the middle man, providing a pool of tutors, allowing you to get the tutor that suits you the most, choosing from the recommendation feature in the application which would find the tutor(s) that matches most to your specifications, or needs.

System Capabilities

- User can specify the type of the tutor
 - User can specify the gender of the tutor
 - User can specify the age range of the tutor
- User can specify place and time of the tutoring session
- User can specify whether the user is studying individually or with a group
- User can specify the budget the user have
- User can specify the subject to be taught

- User can review the tutor after each completed session
 - User can rate the tutor from 1 to 5 stars with 5 stars indicating the perfect score.
- Tutor can reject your request if he/she is not available at that time of request.
- User can cancel any tutor request (before the time of tutoring session)
- System will recommend the most matched tutor(s) to you, according to the given specifications

Business Benefit

- Earn money from advertisement when tutors want to promote themselves
- Get commission when tutors get hired.
- Have a good image of the company from supporting education.
- Win-Win situation between the tutors, and the company
